

AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A computer readable storage medium ~~encoded~~ with a computer program stored thereon for providing controlled access to a home network, the computer program including instructions for causing one or more devices of the home network to perform steps comprising:

receiving a log-in attempt from a remote user, the log-in attempt originating from an Internet protocol address;

verifying that the remote user is an authorized user of the home network;

generating a network address translation rule associating the Internet protocol address with a port of a device on the home network;

dynamically generating a Web page, displaying a graphical user interface to the remote user, the Web page including links to content on one or more devices on the home network, the content accessible to the one or more devices via a content protocol, the Web page graphical user interface allowing the remote user to select only content or services that the remote user is authorized to select;

transmitting the Web page to the remote user;

receiving a selection request from the remote user;

receiving content from the device using a content protocol and without accessing a [[web]] Web server; and

providing content or services to the remote user according to the selection request, wherein the receiving, verifying, generating and providing are performed by one or more devices of the home network.

2. (Previously Presented) The computer-readable medium of claim 1, the computer program further comprising instructions for causing a gateway of the home network to transmit authentication information regarding the remote user to one or more devices of the home network after verifying that the remote user is an authorized user of the home network.

3. (Previously Presented) The computer-readable medium of claim 1, the computer program further comprising instructions for causing a gateway of the home network to

communicate with the remote user according to a first protocol different from a second protocol used for communication between the gateway and one or more devices of the home network.

4. (Previously Presented) The computer-readable medium of claim 3, wherein the first protocol is HTTP.

5. (Previously Presented) The computer-readable medium of claim 3, wherein the second protocol is one of Windows networking (smb) or UPnP.

6. (Currently Amended) A gateway configured to provide controlled access to a home network, the gateway comprising:

- a first port configured to receive a log-in attempt from a remote user, the log-in attempt originating from an Internet protocol address;

- a second port configured for attaching a network device of the home network; and
- at least one processor configured to:

- verify that the remote user is an authorized user of the home network;

- generate a network address translation rule associating the Internet protocol address with the second port;

- dynamically generate a Web page, ~~display a graphical user interface to the remote user,~~ the Web page including links to content on one or more devices on the home network, the content accessible to the gateway via a content protocol, the Web page ~~graphical user interface~~ allowing the remote user to select only content or services that the remote user is authorized to select;

- transmit the Web page to the remote user;

- receive a selection request from the remote user;

- receive content from the network device using a content protocol and without accessing a ~~[[web]]~~ Web server; and

- provide content or services to the remote user from the network device attached to the second port according to the selection request.

7. (Currently Amended) A method of providing controlled access to a home network, the method comprising:

- receiving, at the home network, a log-in request from a remote user;

- capturing, at the home network, the remote user's Internet protocol address;

- authenticating the remote user;

automatically ~~configuring a gateway of the home network to allow~~ providing access to predetermined content, services or devices by the authenticated remote user-~~authenticated~~;

dynamically generating a Web page, the Web page including links to content on one or more devices on the home network, the content accessible to the gateway via a content protocol, the Web page allowing the remote user to select from the predetermined content, services or devices;

automatically transmitting the Web page to the remote user;

receiving content from a network device using a content protocol and without accessing a ~~[[web]]~~ Web server; and

providing access to a portion of the predetermined content, services or devices according to a selection of the remote user.

8. (Currently Amended) A home network, comprising:

a first network device configured to provide content using a content protocol, wherein the first network device is not configured to provide content via a ~~[[web]]~~ Web server; and

a gateway comprising a first port and a second port, the gateway configured to

communicate with the first network device via the first port;

communicate with an external network via the second port;

receive a log-in attempt from a remote user, the log-in attempt originating from an address on the external network;

verify that the remote user is an authorized user of the home network;

generate a network address translation rule associating the address with the first port;

dynamically generate a Web page, ~~display a graphical user interface to the remote user,~~ the Web page including links to content on one or more devices on the home network, the content accessible to the gateway via a content protocol, the Web page ~~graphical user interface~~ allowing the remote user to select only content that the remote user is authorized to select;

transmit the Web page to the remote user;

receive a first selection request from the remote user;

receive content from the first network device using the content protocol; and

provide content to the remote user from the first network device according to the first selection request.

9. (Original) The home network of claim 8, wherein the gateway communicates with the first network device via a first protocol different from a second protocol that the gateway uses for communication with the external network.

10. (Original) The home network of claim 8, wherein the first network device comprises a personal computer or a network attached storage device.

11. (Original) The home network of claim 8, further comprising a second network device, the gateway being further configured to:

display the graphical user interface to the remote user, the graphical user interface allowing the remote user to select services from the second network device that the remote user is authorized to select;

receive a second selection request from the remote user; and

provide services to the remote user from the second network device according to the second selection request.

12. (Original) The home network of claim 11, wherein the second network device is a webcam or a device for streaming audio data.

13. (Currently Amended) A method for providing controlled access to a home network, the method performed by one or more devices of the home network, the method comprising:

receiving a log-in attempt from a remote user, the log-in attempt originating from an Internet protocol address;

automatically verifying that the remote user is an authorized user of the home network;

automatically generating a network address translation rule associating the Internet protocol address with a port of a device on the home network;

automatically generating a Web page, displaying a graphical user interface to the remote user, the Web page including links to content on one or more devices on the home network, the content accessible to the one or more devices of the home network via a content protocol, the Web page graphical user interface allowing the remote user to select only content or services that the remote user is authorized to select;

transmitting the Web page to the remote user;

receiving a selection request from the remote user;

receiving content from the device using a content protocol and without accessing a ~~[[web]]~~ Web server; and

automatically providing content or services to the remote user according to the selection request, wherein the receiving, verifying, generating and providing are performed by one or more devices of the home network.

14. (Original) The method of claim 13, further comprising the step of automatically transmitting authentication information regarding the remote user to one or more devices of the home network after automatically verifying that the remote user is an authorized user of the home network.

15. (Original) The method of claim 13, further comprising communicating with the remote user according to a first protocol different from a second protocol used for communication between the gateway and one or more devices of the home network.

16. (Original) The method of claim 15, wherein the first protocol is HTTP.

17. (Previously Presented) The method of claim 15, wherein the second protocol is one of Windows networking (smb) or UPnP.

18. (Currently Amended) A gateway for providing controlled access to a home network, the gateway comprising:

means for receiving a log-in attempt from a remote user, the log-in attempt originating from an Internet protocol address;

means for verifying that the remote user is an authorized user of the home network;

means for generating a network address translation rule associating the Internet protocol address with a port of a device on the home network;

means for dynamically generating a Web page, displaying a graphical user interface to the remote user, the Web page including links to content on one or more devices on the home network, the content accessible to the gateway via a content protocol, the Web page graphical user interface allowing the remote user to select only content or services that the remote user is authorized to select;

means for transmitting the Web page to the remote user;

means for receiving a selection request from the remote user;

means for receiving content from the device using a content protocol and without accessing a [[web]] Web server; and

means for providing content or services to the remote user according to the selection request.
